# Cybersecurity Solutions
# Identify

Sure's comprehensive security portfolio aligns closely with the National Cyber Security Centre and Guernsey Financial Services Commission Cyber Security Rules. This ensures that we can help you to be more compliant with regulation and create a safer environment for your critical business data.

The compliance framework comprises five focus areas for business cyber-security. In the identify phase we define the data and applications that are critical to your organisation and assess the impact on your business if these assets were compromised.

Solutions

Respond · Recover · Identify · Protect · Detect

## Audit

Our experts can help you identify your key systems, what data you hold, where it is located and its sensitivity level. This will allow you to fully understand the potential impact of an incident on your business.

## Comply

Our consultancy services can provide valuable advice to ensure that you can achieve and maintain PCI and other regulatory compliance.

## Test

From penetration testing to vulnerability assessments we can ensure that you uncover potential weaknesses before they are exploited. Often businesses are not aware of their exposure until testing reveals gaps in their defences.

## Virtual CISO

Many organisations do not have the ability to engage full time CISO resources. However, flexible, fractional access to a senior security consultant can inform and improve your security decision making.

## Advisory & Design

At Sure we have a team of specialist consultants with extensive expertise in cyber-security solutions. We can help you audit your infrastructure and processes, identify vulnerabilities and implement robust security systems. Ask your account manager how Sure's Advisory & Design Services can help with your cyber-security needs.
