Managed Services
Netflow traffic analysis

Your IP bandwidth is valuable. With Sure's NetFlow traffic analysis, we can give you real-time knowledge of what is happening within your network for full visibility of how your service is being used. You can then use the data to diagnose performance issues, optimise network performance and undertake policing of users. Available as a stand-alone option or in conjunction with our managed or monitored services. Sure's Managed Network Services are based on IT Industry best practice and are designed to ensure that your network can change to adapt to your business needs.

Clearer visibility
Monitor your network, discover traffic patterns and identify users and applications which are using excessive bandwidth.

Respond faster
Greater visibility into malicious or malformed traffic flows enables faster troubleshooting and increased efficiency.

Optimise QoS policy
If your business relies on latency critical applications, working out how class maps are performing will help confirm that prioritised traffic passes smoothly through the network.

Easy accessibility
24/7 web interface to see your performance metrics, including dashboards for visual correlation across all your network data and NetFlow analytics.

Find "bandwidth-hog" users
Just a handful of users can be responsible for heavy bandwidth consumption, but with this insight, traffic bottlenecks due to improper or excessive network usage are avoidable.

Discover app & protocol usage
Identify which categories consume the most bandwidth.

Wireless optimisation
Monitor wireless LAN controller traffic to ensure that, in today's mobile world, you keep your wireless network running smoothly.

Monitor Meraki wireless
Visualize the traffic flows on your Cisco Meraki interfaces for better monitoring of the bandwidth use in your Cisco Meraki wireless environment.

Identify malicious traffic
Monitoring traffic highlights any malicious or intrusive traffic.

Advisory & Design

At Sure we have a team of specialist consultants with expertise in designing and optimising customer networks including network management and monitoring. Ask your account manager how Sure's Advisory & Design Services can help modernise your infrastructure.
