

Cybersecurity Solutions

Microsoft Teams Archiving

Sure's Microsoft Teams Archiving enables organisations to protect, discover, investigate, and recover data from internal and external communications through a single, fully integrated solution that protects cloud applications, and supports e-discovery and backup.

Reduce the cost and complexity of archiving, governance, and compliance

Sure's Mimecast Archiving for Teams will:

- Safeguard against accidental or malicious deletion of content, protecting data and information through simple, granular export and restore operations.
- Protect against threats and risks through reliable, scalable safeguarding of data with encrypted file storage back-up.
- Identify, capture, and preserve relevant collaboration content to respond to e-discovery requests, case reviews, and legal and regulatory requirements.
- Provide enhanced visibility and reduced risk through a single point of control for multiple cloud applications without sacrificing employee productivity.

Mitigate common archiving challenges

E-discovery

- Search and collect records
- Legal hold management
- Early case assessment

Compliance

- Identify policy violations
- Implement minimum retention periods
- Monitoring for suspicious behavior

Backup and Recovery

- Recovery of lost data
- Missing component of O365
- Record all teams conversations

Access and Productivity

- Mobile Access
- End user search < 7 sec
- Intuitive interface

Microsoft Teams is the fastest growing business application ever, its now a major target for cyber deception. Take advantage of the Teams Archiving to extend your security, governance and compliance.

Benefits

- Regain control of collaboration tools like Microsoft Teams
- Respond to governance events effectively and quickly
- Protect communications and intellectual property
- Manage user and organisational risk without sacrificing productivity
- Ensure compliance and reduce regulatory risk

Advisory & Design
