

# Trustwave Vulnerability Scanning

## ▶ DATA-DRIVEN SECURITY INSIGHTS FOR YOUR ORGANIZATION IN REAL-TIME

### Benefits

- Continuous visibility into IT assets and associated vulnerabilities
- Schedule tests, view your asset catalog and drill down into detailed findings
- Save time and resources by chasing fewer false positive results
- Reduce risk by focusing resources on the most significant vulnerabilities
- Leverage expertise and intelligence gathered by the SpiderLabs® research team

Running a secure digital organization at today's business pace requires continuous, up-to-the-minute visibility into IT vulnerabilities which can lead to security breaches. Enterprise networks are susceptible to vulnerabilities such as software flaws and configuration issues. Security professionals need to identify, classify, remediate or mitigate the vulnerabilities that attackers could exploit to access your data. Continuous vulnerability scanning is a critical requirement for effective cyber defense, according to industry analysts. Trustwave Vulnerability Scanning provides continuous insights on what assets are in your IT environment and how vulnerable they are to attack.

### Get the Complete Picture

Organizations need visibility into their IT assets and where they are vulnerable to attack and/or compromise. The release of hundreds of new threats into the wild each month challenges even the most sophisticated IT security professionals. Trustwave Network Scanning provides insight into their network vulnerabilities.

Trustwave makes it easy for you to continuously test and retest for vulnerabilities with a full suite of testing capabilities managed within a unified portal. You get a dashboard view of your entire asset catalog to gain a comprehensive understanding of your risk exposure and compliance posture.

## TRUSTWAVE VULNERABILITY SCANNING

### Unlimited Asset Discovery Scans

With today's complex, distributed and fluid IT environments, it's difficult for companies to have a handle on their IT assets at any given point in time. Once you are up and running in our self-service portal, you can schedule unlimited discovery scans to identify and map out your organization's assets. Using Trustwave's centralized asset manager, you can categorize them by location, function, and/or importance.

### Managed Application Scanning

Assess applications prior to deployment or test them in production and protect these front doors to your sensitive data.

### Network Scanning

Gain insight into your network weaknesses so you can protect confidential information, ensure the integrity and availability of IT systems, and address compliance objectives.

## Managed Application Scanning

Assess applications prior to deployment or in production with Trustwave Managed Application Scanning.

- Stack rankings make it easy for staff to spend time on the most significant threats first
- Highly accurate vulnerability discovery rates with minimal false positives means less staff time wasted on non-issues
- Behavior-based technology eclipses a signature-based approach to emulate a true hacker and maintain the state of the application while attacking the application at the browser level.

The Trustwave approach identifies runtime vulnerabilities that might be missed in scanning strings of code.

## Network Scanning

Trustwave Network Scanning provides insight into your network vulnerabilities and where your network may be exposed to compromises from within and outside the corporate firewall.

### External Vulnerability Scanning

Regularly scheduled or ad-hoc in-the-cloud, external scanning offers insight into what vulnerabilities are being exposed through your firewall to the outside world. Regular vulnerability updates are provided by the elite Trustwave SpiderLabs® research team.

### Internal Vulnerability Scanning

Internal scanning offers the same industry leading vulnerability technology as external scanning, providing you with a hacker's view of vulnerabilities inside the network behind your firewall. Trustwave Vulnerability Scanning is available as a self-service application or as a managed scanning service, part of Trustwave Managed Security Testing service.

## Other Available Security Testing

We offer a full suite of security testing capabilities managed within a unified portal. In addition to Trustwave Vulnerability Scanning, the following services are available:

- Internal/External Network Penetration Testing
- Internal/External Managed Application Penetration Testing
- Managed Database Scanning

Penetration testing services are delivered by Trustwave SpiderLabs® — an advanced security team focused on forensics, ethical hacking and managed application security testing.
